

# ECG Premises in Smart Village (B17)

## Location

Smart Village, Egypt

## Scope of Work

Concept design  
Design development  
Detailed design  
Tender documents  
Tender action  
Construction management  
Construction supervision

## Types of Activities

Architectural  
Communications and security systems  
Electrical  
Mechanical  
Structural

The new premises of ECG Engineering Consultants Group in Smart Village (B17) were inaugurated in 2009. The building also accommodates TEA Computers.

With a total built-up area (BUA) of 11,000 m<sup>2</sup>, the building comprises the following components:

- 2-floor basement (BUA 3,000 m<sup>2</sup>): parking area (153 cars) and utilities;
- Ground floor (BUA 2,000 m<sup>2</sup>): main reception area, offices and services;

- First, second and third floors (BUA 6,000 m<sup>2</sup>): office spaces, in addition to elevator lobby, reception area, prayer rooms, meeting rooms, and services.

The main objective adopted in the architectural design was to put up a functional, landmark office building equipped with high-quality exterior and interior finishing materials.
