

Riyadh Galleria

Client

Biout Mecca for Contracting, KSA.

Scope of Work

Concept design
Schematic design
Detailed design

Location

Riyadh, KSA

Types of Activities

Architectural
Communications and security systems
Electrical
HVAC
Mechanical
Structural

Located in the heart of Riyadh City, Saudi Arabia, Riyadh Galleria was designed to create a unique shopping experience.

It unrolls carefully constructed interiors, hi-tech structural systems (spider system, curtain walls, and precast concrete walls), and naturally lighted wide public spaces adopting 40-m span space trusses for greater flexibility and a broader vision for mall visitors.

Covering a total land area of 150,000 m², the project called for the development of a three-floor shopping

mall and a hypermarket. The mall stretches over a total footprint area of 50,000 m² and has a total built-up area of 100,000 m². It features a leasable area of 38,000 m², 162 shops, department stores, a food court hosting 26 food chains and 4 restaurants, a children's play area; and funfair on the ground floor. Its design concept was based on 12-m structural module to facilitate a favorable layout of retail shops with varying areas.

On the other hand, the hypermarket, which unveils a one double-height ground floor, accommodates a total rental area of 11,000 m² and is served by 2,000-slot car parking.
